

## YOUR PATH TO ORGANIC SUCCESS

### FIVE STEPS TO CERTIFICATION

1. Applicant completes and submits the application, contract, and annual certification fee. The application fee must be paid to receive the Envirocann Management Plan (EMP) and start the certification process.
2. For all scopes, the applicant completes and submits an Envirocann Management Plan (EMP). The EMP is the farm and/or facility plan that details all standard operating practices (SOP) and materials in use.
3. A desk audit of the EMP is conducted by Envirocann staff to determine if the site/product(s) can meet certification criteria. If the EMP is accepted, then an annual inspection is scheduled. If the application is incomplete, then the applicant may need to provide more information before an inspection can be scheduled.
4. An annual inspection is conducted. An authorized representative of the operation is required to accompany the inspector on the initial visit. The inspector verifies that the EMP accurately reflects the practices in place, including environmental compliance, and social justice. All areas of production will be inspected, along with post-harvest/post processing, storage and processing facilities.
5. Certification is granted to clients that meet the certification criteria. If further information or action plans are required to verify compliance, applicants will receive a notification from Envirocann.

## Envirocann Management Plan 'EMP'

### Required Documents to provide:

1. **Site Map and Field Diagrams**
2. **Fertilizer and IPM Material Inputs List**
3. **Sanitization and co-mingling Prevention Practices**
4. **Site History and Previous Farming Practices**
5. **Processing and Distribution Plans**
6. **Record Keeping and Receipts**
7. **Product Labels and Packaging Examples**

### Topics of Interest

**NURSERY STOCK** - We are committed to helping our clients address concerns around sourcing organic plants and nursery stock. We are available to discuss allowed inputs and practices, banned inputs and practices, and commercially viable options for growers.

**SITE HISTORY** - Site, growing medium, and spray history are common barriers for some growers and cultivation sites. We are here to help you assess any risks and determine if your site qualifies or can be converted to organic production.

**MIXED PRODUCTION SITES** - Production sites that include both conventional and organic operations must have clear sanitization and comingling mitigation plans. We work with many mixed operators and have simple to follow guidelines for you if needed.

**PROCESSING AND DISTRIBUTION** - OCal requires a complete supply chain to ensure the certified product is uncontaminated throughout the path to market.

**USE OF THE OCAL LOGO** - The digital file for the OCal logo will be provided immediately once certification process is complete. Once certified, the OCal logo can be used on all product packaging, marketing materials, and merchandise. You choose which one or both to use.

No Refunds. Certification is not guaranteed.
